Identity/Intersect in Pop Mus

While most scholars agree that music reflects the particular time and place from which it originates, some would go so far as to argue that, in some circumstances, music can also act as the driving force behind shifts in social mores and attitudes. Scholars of popular music point to the role played by music in such events as the civil rights and anti-war movements as examples of its power to enact social change. In this course, we will examine how popular music has challenged (and sometimes reinforced) existing attitudes about personal identity over the past five

decades through its myriad representations of gender, sexuality, race, culture, aging, disability, and so on. Our discussions will be intersectional in nature and will examine, for example, how gendered identities (and gendered oppression) are experienced differently according to race or how racial identities (and racial oppression) is altered or amplified when sexual identity is added to the mix. Readings chosen from the popular music literature will help to construct each identity and to frame its intersections with other identities from a scholarly point of view. We will extrapolate our findings to music education and will discuss the impact of popular representations (or non-representations) of various identities on students as they begin to forge their own identities. Students will also be asked to select an artist, song, or genre for close study as this contributes to our understanding of intersectionality. At the heart of the class is the question of how music can effect social change - a topic that will be of interest to music educators who hope to connect music to the student's broader cultural experience. For students enrolled in the Summer Music Education Masters program only.
